

DEPARTMENT OF RACHANA SHARIR

Anatomy

It is one of the basic subjects in medical studies, which deals with the structure of human body. This is one of the vital subjects useful for better understanding of principles of treatment. Knowledge of applied anatomy will enable the scholar to do a preliminary diagnosis of the disease. Better understanding of the anatomy of the organs and systems will make a better surgeon. Hands on training in preparation of models, embalming techniques, plastination techniques, anatomical paper art, drawings – collectively, do and learn policy is adopted in the department.

Body Donation Campaign is launched from the department as well. Anatomy museum based on the principles of Ayurveda is established for better understanding of the subject for the benefit of medical graduates, school children and public.

VISION

“ShareeraRachana for healthy human being”

MISSION

- Preparing the graduates and specialists in anatomical expertise and integrate interdisciplinary Teaching
- Training the scholars to teach basic and applied human anatomical knowledge geared towards Ayurveda health
- Exploring the unexplored areas of research in core concepts, terminology and distinctive Ayurveda perspective on human anatomy and its clinical application
